AB A novel pyridothienophene inhibitor of PTP1B was discovered by rational screening of phosphotyrosine mimics at high micromolar concns. The potency of this lead compound has been improved significantly by medicinal chemical guided by X-ray crystallog. and mol. modeling. Excellent consistency has been observed between structure-activity relationships and structural information from PTP1B-inhibitor complexes.

AB The invention provides a method for using a protein tyrosine phosphatase (PTPase) inhibitor (especially an inhibitor of PTPase 1B) described by the formula (I) [R1 = CO2H and derivs., 5- to 6-membered heterocyclyl, H, halo, CN, CONH2 and derivs.; R2 = CN, CO2H and derivs., CONH2 and derivs., etc.; X = (un)substituted alk(en/yn)ylene, O-alkylene, S(O)n-alkylene, etc.; n = 0-2; Y, Z, U, T, A = independently CH and derivs., N, S, O, one or two of Y, Z, U, T, A can be absent; each R3 = independently H, CN, OH, NH2, NO2, (un)substituted aryl, 5- to 8-membered heterocyclyl, alk(en/yn)yl, etc.] or a pharmaceutically acceptable salt or prodrug thereof for the treatment of diabetes, obesity, autoimmune diseases, etc. (no data). The invention also provides the preparation of fused thiophenes

I. For example, II was prepared, in 47% yield, by cyclization of

L3 ANSWER 4 OF 15 CAPLUS COPYRIGHT 2007 ACS on STN (Continued)

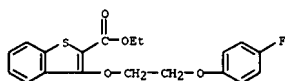

AB Title compds. I [wherein X = O, S; R1 = (un)substituted carboxyalkyl, alkoxyalkyl, arylalkoxyalkyl, etc.; R2 = OH and derivs., NH2 and derivs., aryloxy, etc.; R3, R4, R5, R6 = independently H, halo, OH, alkyl, alkoxy, CN, CF3, monoalkyl/dialkyl/amino, NO2] were prepared as antidiabetic agents for treating diseases associated with insulin resistance syndrome. For example, II was prepared by reacting thioalicyclic acid with Et bromoacetate, followed by cyclocondensation with 1-bromopinacolone. In an in vitro test, II, at 10⁻⁶ M, displayed a glucose-induced stimulation factor of insulin secretion of 189% at a dose of 8 mM glucose digested by the pancreatic exocrine tissue of rats. Thus, I and their compns. are used for treating hyperglycemia, diabetes, dyslipidemia, obesity, and microvascular and macrovascular complications arising from diabetes.

AB Title compds. I [wherein R1 = (un)substituted cycloalk(en)yl or 4/5/6-membered heterocycloalkyl; R2, R3 = Me or OMe; L = absence or alkylene; with some limitations, and pharmaceutically acceptable salts thereof] were prepared as phosphoinositide-3-kinase (PI3K) inhibitors. For example, benzo[b]thiophenecarboxamide II was synthesized in several steps starting from 3-methoxy-4-methylbenzaldehyde. I were tested in several biol. assays, and showed inhibitory activity against PI3K with IC50 (μM) values of 0.003-2.550 (0.024 for II). Therefore, I and their pharmaceutical compns. are useful in the treatment of diseases and conditions, including inflammatory diseases, cardiovascular diseases, and cancers.

AB The reaction of Me thiosalicylate with excess Me chloroacetate in the presence of potassium carbonate gives Me 3-[(methoxycarbonyl)methoxy]benzo[b]thiophene-2-carboxylate which on cyclization by action of potassium tert-butoxide gives Me 3-hydroxy[1]benzothieno[3,2-b]furan-2-carboxylate. Its base catalyzed hydrolysis and decarboxylation forms [1]benzothieno[3,2-b]furan-2(2H)-one whose reduction with NaBH4 gives the title compound, I.

AB The Dieckmann condensations of Me [(2-methoxycarbonyl)phenyl]-X-acetates, 2-MeO2CC6H4XCH2CO2Me (X = O, S, SO2, NH, NMe), initiated by action of magnesium methoxide, ethoxide, isopropoxide and other basic reagents have been studied under various conditions. Whereas magnesium methoxide has comparable efficiency as sodium methoxide and potassium tert-butoxide in syntheses of the benzoheterocyclic compds. I (R1 = H), magnesium ethoxide gives I (R = Et, R1 = H, X = O) in a medium yield, and magnesium isopropoxide is quite inefficient in the condensation reaction. The alkylation of I (R = Me, R1 = H, X = O, S, NMe) with Me chloroacetate in the presence of sodium hydride in DMF gives I (R1 = CH2CO2Me) which, on action by potassium tert-butoxide, undergo the cyclization reaction to give esters II (X = S, NMe).

AB Title compds. I [R = H, alkyl, naphthyl, anthryl, cycloalkyl, haloalkyl, (un)substituted Ph, heteroaryl, benzyl, phenylalkenyl, phenylalkynyl, etc.; X1-X4 = R, cyano, NO2, NO, etc.; n = 0-2; R1, R2 = R, except than if R = H, Cl, R1 and R2 independently cannot be mono-, di-, tri-, or chloronitrophenyl; N1R2 = N-heterocyclyl] were prepared. To Me 5-chloro-2-mercaptobenzoate in MeOH was added NaOMe followed by N-[(3-chlorophenyl)methyl]chloroacetamide and the mixture refluxed to give I (X1, X3, X4 = H; X2 = Cl; R1 = H, R2 = 3-ClC6H4CH2; n = 0). In rat platelet activating factor-induced hyperalgesia, I (X1, X2, X3 = H; X4 = MeS; R, R1 = H; R2 = 3-ClC6H4; n = 0) at 30 mg/kg, orally, gave 90% analgesia.

AB Sixteen title compds. (I, II, III; R1 = H, CO2H; R2 = iso-Pr, tert-Bu, dimethoxyphenylethyl) were tested for blood platelet aggregation-inhibiting activity in vitro with human blood. In general, III with a cyclopentane structure were less active than I and II, with benzene and cyclohexane structures, resp. The presence of a carboxyl group in the 2-position tended to decrease activity.

 AB The inhibitory activity of 20 bicyclic thiophenes towards ADP-, adrenaline-, or collagen-induced aggregation of human platelets was examined. The activities were compared with those of standard reference compounds, aspirin, ticlopidine, trifluoromethyl, and sulfapyrazole. Eight of the tested 20 compounds had inhibitory activity better than the reference compounds.
 Structure-activity relations are discussed.

AB The thiophenic isoster of propranolol (I.HCl) and related compounds, are prepared by 2 routes. The protecting and enolizing properties of the 2-methoxycarbonyl group on benzo[b]thiophen-3-one, along with its facile removal, are utilized in the first route. In the second one, conversion of 3-bromobenzo[b]thiophene into II is the key step. Hydrolysis of II to the corresponding diol, in order to obtain a furanic isoster of propranolol was unsuccessful.
